

Liquid Voice Radio Recording for Tait DMR Systems

Efficient and Cost-Effective Radio Recording
for Business Communications

OVERVIEW

Liquid Voice's Radio Recording solution for Tait DMR systems offers fully integrated, easy-to-deploy, and user-friendly capture of every communication. This solution is ideal for organisations requiring a cost-effective solution for critical voice recording while maintaining scalability of systems for future growth.

Additionally, the Liquid Voice system has 100+ integrations with other radio, phone, dispatch, PA and contact centre systems, so audio can be captured, stored and analysed in one place.

CORE SYSTEM FEATURES

- Unparalleled scalability and flexibility
- Modular design allows unlimited channels and sites
- Centralised access regardless of the number of sites
- Fully on-premises, cloud, or hybrid deployment options
- BYO (Bring Your Own) server option for customised infrastructure
- Integration via Tait Voice Recording Protocol

High availability options,
including active/active
recording and redundant
application servers

Configurable retention
periods with indefinite
storage capabilities

Flexible archiving to locally
attached storage, NAS, SAN,
Azure Blob, and S3-
compatible storage

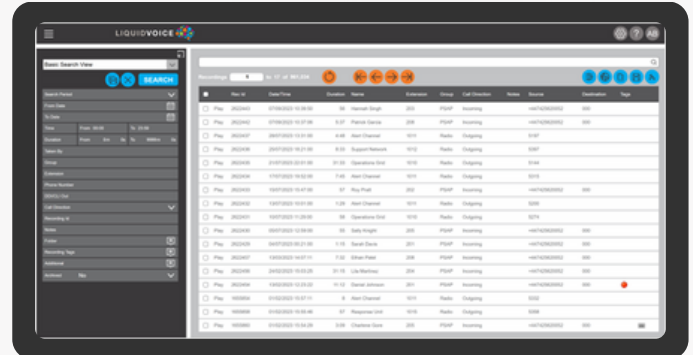

RAPID DEPLOYMENT & EASY-TO-USE

- Simplified setup process for quick implementation
- Integrates into your existing infrastructure
- Accessible via any modern web browser
- No additional licenses required for application access
- Support for industry-standard server tools
- Comprehensive API for third-party system integration
- SNMP support for monitoring

Advanced Search, Retrieval, and Reporting

- Fast search capabilities with comprehensive metadata
- Incident reconstruction with timeline view
- Playback of in-progress calls
- Secure export options for individual or multiple recordings
- Channel usage and utilisation reports

Security and Compliance

- Tamper-proof recording storage with integrity checks
- Industry-standard encryption for storage and playback (AES-256 & TLS 1.3)
- All data stored and in transit is encrypted
- Fully customisable role-based security
- Authentication and automatic user provisioning from external directories such as Active Directory or Microsoft Entra
- Comprehensive auditing
- Built-in support for regulatory standards

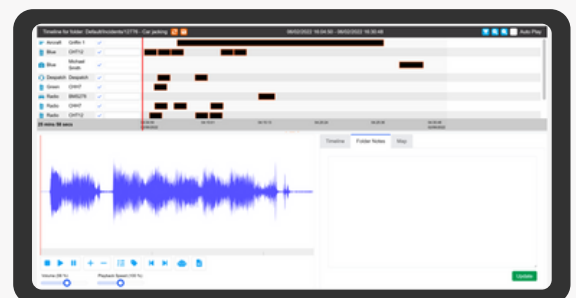

Optional Add-Ons

- **Transcription:** Convert audio to text for enhanced searchability
- **Voice Analytics:** Real-time and post-call analysis for automated insights
- **Quality Management:** Tools to monitor, evaluate, and improve communication quality
- **Screen Recording:** Capture on-screen activity alongside audio
- **Advanced Event Reconstruction:** Incorporate non-voice media types such as video and photographs into reconstructions. Record and display device locations for improved operational visibility

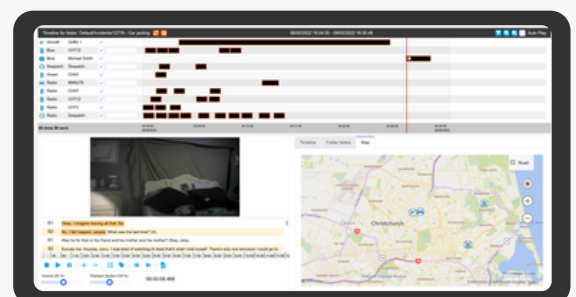

Extensive Integration and Interoperability

- Support for industry-standard server tools
- Comprehensive API for third-party system integration
- SNMP support for monitoring
- Future-proof integrations with open standards and protocols

Standard feature: Event Reconstruction

Add-on features: Advanced Event Reconstruction & Transcription

WHY CHOOSE LIQUID VOICE FOR TAIT DMR RECORDING?

Our solution combines enterprise-grade reliability, with intuitive design and speedy deployment, giving you the confidence and clarity needed to manage critical radio communications.

Tailored for organisations requiring critical recording, our platform helps you capture and store essential information, improving efficiency and performance.

If you're interested in using Liquid Voice Radio Recording for your Tait DMR system, get in touch with us today.
