Liquid Voice Radio Recording for Tait P25 Systems

Secure, Reliable, and Comprehensive Radio Recording for Critical Communications

OVERVIEW

Liquid Voice's Radio Recording solution for Tait P25 systems offers fully integrated, secure, and reliable capture of every communication. From real-time monitoring to long-term archiving, gain immediate access to critical information, enabling fast response times and in-depth post-incident analysis.

Additionally, the Liquid Voice system has 100+ integrations with other radio, phone, dispatch, PA and contact centre systems, so audio can be captured, stored and analysed in one place.

CORE SYSTEM FEATURES

- Unparalleled scalability and flexibility
- Modular design allows unlimited channels and sites
- Centralised access regardless of the number of sites
- Fully on-premises, cloud, or hybrid deployment options
- BYO (Bring Your Own) server option for customised infrastructure
- Integration via ISSI
- End-to-end encryption support with OTAR and KFD integrations

High availability options, including active/active recording and redundant application servers

Configurable retention periods with indefinite storage capabilities

Flexible archiving to locally attached storage, NAS, SAN, Azure Blob, and S3-compatible storage

Registered Technology Partner

ENHANCED SECURITY AND COMPLIANCE

- Tamper-proof recording storage with integrity checks
- Industry-standard encryption for storage and playback (AES-256 & TLS 1.3)
- Fully customisable role-based security
- Authentication and automatic user provisioning from external directories such as Active Directory and Microsoft Entra
- Comprehensive auditing
- Built-in support for regulatory standards

Advanced Search, Retrieval, and Reporting

- Fast search capabilities with comprehensive metadata
- Incident reconstruction with timeline view
- Playback of in-progress calls
- Secure export options for individual or multiple recordings
- Channel usage and utilisation reports

Extensive Integration and Interoperability

- Support for industry-standard server tools
- Comprehensive API for third-party system integration
- SNMP support for monitoring
- Future-proof integrations with open standards and protocols
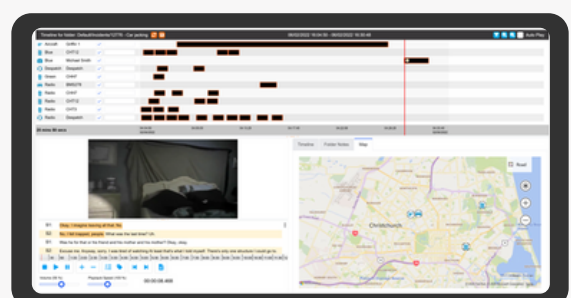

Optional Add-Ons

- *Transcription:* Convert audio to text for enhanced searchability
- *Voice Analytics:* Real-time and post-call analysis for automated insights
- *Quality Management:* Tools to monitor, evaluate, and improve communication quality
- *Screen Recording:* Capture on-screen activity alongside audio
- *Advanced Event Reconstruction:* Incorporate non-voice media types such as video and photographs into reconstructions. Record and display device locations for improved operational visibility

Seamless Usability and Accessibility

- Accessible via any modern web browser
- No additional licenses required for application access

Standard feature: Event Reconstruction

Add-on features: Advanced Event Reconstruction & Transcription

WHY CHOOSE LIQUID VOICE FOR TAIT P25 RECORDING?

Our solution combines enterprise-grade reliability, strict security, and intuitive design, giving you the confidence and clarity needed to manage critical radio communications. Whether you're in government, military, public safety, transportation, utilities, healthcare, or private industry, our platform is tailored to safeguard essential information and enhance performance in high-stakes environments.

Designed to meet the diverse needs of mission-critical operations, our solution ensures seamless communication and operational efficiency when it matters most.

If you're interested in using Liquid Voice Radio Recording for your Tait P25 system, get in touch with us today.
